# Lab Instructions: Week 09 Mini-Sprint

*Agile Documentation in 90 Minutes — "Just Enough Documentation" (Rüping)*

| | |
|---|---|
| **Course & Code:** | ICSI438 Software Project Documentation \| Department of Information & Computer Science |
| **Format & Method:** | 90-Minute Timeboxed Agile Mini-Sprint \| "Just Enough Documentation" Framework (Andreas Rüping) |
| **Submission Due:** | End of 90-Minute Lab Session (GitLab Repository Commit + Board Link on LMS) |
| **Tools Required:** | GitLab Issue Board, Markdown Editor, Git CLI / IDE Integration |

## 1. Objectives & Methodological Framework

In this lab session, student teams treat documentation as genuine, production-grade sprint work. Guided by Andreas Rüping's concept of **"Just Enough Documentation"**, teams execute a complete agile cycle in 90 minutes. By treating documentation artifacts as backlog items subject to rigorous Definition of Done (DoD) criteria, students learn to eliminate documentation waste and deliver focused, high-value technical documentation.

## 2. Team Role Allocation

Each team must assign the following agile roles prior to sprint execution:

- **Product Owner (PO):** Defines documentation scope, prioritizes user stories on the GitLab board, and validates acceptance criteria during the Sprint Review.
- **Scrum Master / Timekeeper:** Enforces timeboxes strictly (gives verbal warnings 2 minutes before each timebox ends), facilitates daily standup checks, and guides the Retrospective.
- **Development / Technical Writing Team:** Authors documentation artifacts in Markdown, formulates DoD criteria, and pushes commits to the GitLab repository.

## 3. Minute-by-Minute 90-Minute Sprint Schedule

| Timebox | Sprint Phase | Key Tasks & Execution Steps | Phase Output |
|---|---|---|---|
| **00–10 min** | Kick-off & Sprint Goal | Assign team roles (PO, SM, Devs). Formulate explicit Sprint Goal: *"Our project documentation is lean, audience-tailored, and 'done'."* | Role matrix & Sprint Goal on GitLab Board. |
| **10–25 min** | Sprint Planning | Create ≥3 documentation user stories on GitLab Issue Board. Estimate Story Points (Fibonacci) and apply label `doc-task`. | Backlog with estimated `doc-task` stories. |
| **25–55 min** | Sprint Part 1: DoD & Draft | Establish team **Definition of Done (DoD)** with ≥3 documentation-specific quality criteria. Draft core documentation artifact in Markdown. | Team DoD committed to repository. |
| **55–75 min** | Sprint Part 2: Finalization | Finalize documentation artifact (e.g., Lean System README or Architecture Decision Record - ADR). Execute peer review against DoD. | Finished Markdown document matching DoD. |
| **75–85 min** | Sprint Review | Conduct 2-minute live demo per team. PO presents completed documentation artifact; gather peer feedback from other teams. | Peer feedback collected. |
| **85–90 min** | Retrospective | Conduct team Retro (3 questions). Identify 1 concrete improvement action for next week. Answer reflection question on doc waste. | Retro note committed to repository. |

> **Strict Timeboxing Rule:** Timeboxing is mandatory. The Scrum Master must issue a signal 2 minutes before each phase ends. Activities must immediately transition to the next stage upon timebox expiry.

## 4. Concrete Artifact Templates

### A. Team Definition of Done (DoD) Template for Documentation

```
# Team Definition of Done (DoD) — Documentation

A documentation task labeled `doc-task` is considered 'DONE' if and only if:
1. [ ] **Target Audience Fit:** The document explicitly names its primary audience and purpose ("Just Enough").
2. [ ] **Technical Verifiability:** All code blocks, commands, or signatures are copy-pasteable and verified against codebase.
3. [ ] **Structure & Clarity:** Written in valid Markdown, passes spellcheck, and contains no unnecessary fluff words.
4. [ ] **Peer Review & Pipeline:** Peer-reviewed by at least one team member and merged into main branch.
```

### B. Architecture Decision Record (ADR) Template

```
# ADR-001: [Title of Architectural Decision]

* **Status:** [Proposed | Accepted | Superseded] | **Date:** YYYY-MM-DD | **Author:** [Name/Role]

## Context & Problem Statement
Describe the technical context and the problem requiring a decision in 2-3 sentences.

## Decision Outcome
Chosen Option: [Option Name] because [Justification matching project constraints].

## Consequences
* **Positive:** [Benefit 1], [Benefit 2] | **Trade-offs:** [Constraint 1], [Risk 2]
```

## 5. Mandatory Deliverables & Submission Checklist

1. **Team DoD:** Formulated in repository (e.g., `docs/definition-of-done.md`) containing ≥3 documentation-specific criteria.
2. **GitLab Board Configured:** ≥3 user stories labeled `doc-task` with Story Point estimates moved to "Closed / Done".
3. **Finished Documentation Artifact:** One complete, high-quality documentation file (README or ADR) verified against the DoD.
4. **Retrospective Note:** Recorded in repository (e.g., `docs/retrospective-w09.md`) containing 1 concrete action item for next week and the answer to the core reflection question.

> **Mandatory Retrospective Reflection Question:**
> *"Which documentation artifact or section could we have omitted completely without any stakeholder or developer missing it?"* Justify your team's decision based on Rüping's "Just Enough Documentation" philosophy.

## 6. Assessment Rubric (10 Points Total)

| Evaluation Criteria | Points | Requirements for Full Credit |
|---|---|---|
| **Purpose Fit ("Just Enough")** | 3.0 Pts | Artifact perfectly matches target audience needs; no unnecessary fluff; concise and actionable content. |
| **DoD Quality & Compliance** | 2.5 Pts | DoD contains ≥3 rigorous criteria; submitted artifact verifiably satisfies all DoD checklist items. |
| **Agile Board & Story Estimation** | 2.5 Pts | ≥3 user stories properly formatted with acceptance criteria, Fibonacci estimates, and `doc-task` labels. |
| **Team Process & Retrospective** | 2.0 Pts | Strict adherence to timeboxing, active role execution, complete Retro note with 1 actionable improvement. |
